Programming Project 1: Simple FTP Client and Server

Team Members:

- Sushanth Kathirvelu
- Mohammed Danish Khan
- Ola Mustafa Alqahtani

Special Instructions:

- Compile the Server(myftpserver) and the Client(myftp) .java files.
- First Server file should be run followed by the Client file.
- Running the Server file, you are asked to enter the port number. Kindly enter it.
- Running the Client file, you are asked to provide the Server name, kindly provide the Server name or IP address of the server. Later you are asked to enter the port number on which server is running, provide the port number on which server is running i.e. the port number entered in the above step.
- Now we are good to execute the commands.
- Quit command will quit the connection from the client terminal and client shuts down, but the server will continue to run.
